Locking In
Nobody Is Coming to Save You
The Currency of Fulfillment

Introduction

Estimated reading time: 75 seconds

I'm not sure whether you bought this book because the cover looked interesting, someone recommended it, or you were simply curious. Either way, I'm glad you're here.

If you are like most people today, you probably spend more time consuming short-form content—reels, shorts, and infinite scrolling—than you'd like to admit. It's fast, it's addictive, and it usually leaves you feeling empty.

So I wondered: **what if that same fast-paced experience actually left you with something valuable?**

That is why this book exists. The book doesn't tell one long story, spend twenty pages explaining a single idea, or expect you to read from page one to the last page in order.

Instead, think of it as a collection of thoughts. Every entry is different—short, direct, and written to give you something worth thinking about without wasting your time. Some might make you think, some might make you laugh, some you might disagree with, and some may stick with you long after you've closed the book. Take what helps you and leave the rest.

There are no rules here. Open the table of contents, choose the title that catches your attention, and start there. Read one page or ten—the choice is yours. This book was made to fit around your life, not interrupt it.

I do have one recommendation, though. Start with "Why Read the Book?" After that, let your curiosity decide where you go next. Enjoy.

Why read the book?

Estimated reading time: 90 seconds

Well, you see, this book doesn't focus on a single topic, genre, or storyline. Instead, it's all about packing in as much useful information as possible. You don't have to care about every single chapter—just take what you want and leave the rest.

Also, this isn't meant to be like the other books. In the era we're living in right now, millions of people have a really hard time watching a 10-minute video, let alone reading a traditional book. Because we spend hours scrolling through short clips, our focus gets completely fractured. Even if you think your attention span is fine right now, it *will* catch up to you sooner or later.

That is exactly why you should read this book. It's pretty much designed just like the reels you're already addicted to. It's short, it's beneficial, and when you combine those two things, you get a massive hit of dopamine. So yeah, you can think of this as a "reel" book style, because that's the point of it, and that's why it's called the book of ***shorts***.

But here's the difference: this will actually benefit you. The reality is: most of the reels on your feed right now are just pure brain-rot that leave you feeling empty after an hour of scrolling. But you weren't put on this earth to just waste away staring at a screen. You're meant to share your ideas, better yourself, help the people you love, and maybe even impact the world.

So, I highly recommend reading this—whether you're fighting a reels addiction or your attention span is still in a good shape.

Important Note: These chapters are not meant to represent the full scope of these ideas. If you want to build a comprehensive blueprint, I advise you to do further research into the topics covered in each chapter.

@TheAuthor: Congratulations. You just consumed useful content instead of another cat dancing to sped-up music.

#SmallWins #KeepGoing

What if it actually works?

Estimated reading time: 2 minutes

Most people never start working on their goals because they are absolutely terrified of failing.
Your brain is a master at creating worst-case scenarios. The second you think about hitting the gym, reading more, or building a business, your mind instantly whispers: *What if I look stupid? What if I waste my time? What if I fail?*
It uses those questions as an excuse to keep you stuck on the couch, glued to your screen, because staying there feels safe.
But let's flip the question for a second. Let's ask the one thing your brain is too scared to face:
What if it actually works?
What if you *actually* stick to that new habit for a month? What if you build that routine? What if you stop listening to the negative comments, mute the noise, and actually push through the boring parts?
Imagine waking up a year from now, looking in the mirror, and realizing you became the person you always wanted to be. Imagine having the focus, the health, and the life you keep wishing for while you scroll through other people's lives.
It's easy to joke about your broken attention span and pretend you don't care. It's a lot harder to look at your potential and realize you're throwing it away for 15-second videos.

Stop worrying about failing. Start worrying about what happens if you stay exactly the same.

There is a statement I want you to write down on a piece of paper right now and paste it somewhere on your bedroom wall:

You've already spent years of your life trying out failure. You've spent A massive amount of time doing what's easy, chasing what's comfortable, and picking the shortcut—and it didn't make you happy, nor did it get you to your dreams. You already know exactly what that side of life feels like.

So why not try success for once? Why not push yourself just A little bit, just to see what the other side looks like?

@TheAuthor: *You already know what happens if you give up. You're living it. Why not find out what happens if you keep going?*
#WhatIf #NoExcuses #LevelUp

Have you thought about your future?

Estimated reading time: 2 minutes

It’s a heavy question, and most people hate answering it. It feels way too much like a job interview.

But let’s look at this practically. If you want to achieve any kind of real success or hit a specific goal, thinking about your future and actually planning for it isn't optional. It’s the very first step.

Think of your life like using a navigation app on your phone. You would never get into your car, turn on the engine, and just start driving completely random streets while hoping you magically arrive at a great vacation spot. You’d end up running out of gas in the middle of nowhere. Yet, that’s exactly how a lot of people treat their daily lives. They wake up on autopilot, react to whatever happens next, and wonder why they feel stuck in the exact same spot year after year.

Planning isn't about predicting the next ten years perfectly. Nobody can do that. It’s just about programming a destination into your mental GPS so your daily actions actually have a direction.

Here is a weird truth about human psychology: your brain automatically treats your "future self" like a completely different person. It’s like a stranger you don't really know. That’s why it’s so easy to say, *"I'll start that project tomorrow,"* or *"I'll save money next month."* You are basically dumping the hard work onto

a stranger and stealing the comfort for yourself right now.
But guess what? Tomorrow turns into today.
When you sit down and actively plan your goals, you stop torturing your future self. You give yourself an advantage over everyone else who is just drifting along, waiting for luck to hit them. You don't need a 50-page master blueprint. You just need to know what target you are aiming at before you pull the trigger.

@TheAuthor: *If you don't design your own roadmap, you're going to end up driving down someone else's. Where are you heading? #FuturePlanning #GetMoving #NoMoreAutopilot*

1% Better Every Day

Estimated reading time: 2.5 minutes

In his book "*Atomic Habits*", James Clear introduces a concept that completely changes how you look at progress: the idea of getting just 1% better every single day.

When you look at a massive goal—like building a business, getting into peak shape, or breaking a deep scrolling habit—it feels overwhelming. Your brain thinks you need to make a massive, overnight transformation to see success.

That expectation is exactly why people quit by day three.

The math behind the 1% rule is simple. If you improve by just 1% every day for an entire year, the compounding effect means you will end up **thirty-seven times better** than when you started. On the flip side, if you get 1% worse every day, you spiral down almost entirely to zero.

Small actions do not show immediate results. Doing one heavy workout won't give you a healthier body, and writing for 2 hours won't finish a book. Because the immediate reward is missing, it is incredibly easy to slide back into bad routines.

The practical way to gain that 1% every day is by using a rule called **The 2-Minute Rule**.

Your brain naturally resists massive changes because they require too much energy. If you tell yourself, *"I need to study for two hours tonight,"* the friction is too high, and you procrastinate. The 2-Minute Rule bypasses this mental resistance by scaling your goals down into a tiny, unskippable step that takes less than

two minutes, but still forces you to actually start the work.

It isn't about doing something effortless that has nothing to do with the goal. It is about doing the actual task, but in a highly condensed form:

- Instead of "Read 30 pages," the goal becomes **"Read one single page."** You are still reading and processing information, but the volume is completely manageable.
- Instead of "Do a 40-minute run," the goal becomes **"Run down the street for exactly two minutes."** You are still physically moving and breaking a sweat, forcing your body out of comfort mode.
- Instead of "Wake up early and jump into a long routine," the goal becomes **"Wake up and immediately walk five steps away from your bed."** You aren't just opening your eyes and falling back asleep; you are physically breaking the gravity of the mattress.

This sounds simple, but it is deeply psychological. The hardest part of any disciplined task is simply crossing the starting line. Once you push through that initial two minutes of real friction and actually begin the action, your momentum takes over, and continuing the work becomes much easier.

A habit must be established before it can be improved. Stop worrying about conquering the whole day; just focus on winning the first two minutes of the task.

@TheAuthor: *Stop looking at the mountain. Just focus on the first step. If you can win the first two minutes of actual work, the rest of the hour takes care of itself.*
